Green Lake, WI

10:00 am ~ 3:00 pm

Instructors:
Jamie Patton • Nav Ghimire

*An EEO/Affirmative Action employer, University of Wisconsin-Extension
provides equal opportunities in employment and programming,
including Title IX and ADA requirements.*

Topics To Be Covered:

- Why to have Nutrient Management
- State Regulations on Nutrient Management
- Components of a Nutrient Management Plan
- Soil Testing, Sampling and Soil Test Report
- Soil pH and Nutrient Availability.
- Nitrogen Cycle and Nitrogen Crediting
- Manure Management
- Phosphorous and Potassium Management
- Potassium Cycle
- Role of Sulfur in Humus Development
- Carbon-Nitrogen Ratio
- Crop Micronutrients
- Soil health

The Goal of the Nutrient Management Program is to promote profitable and sustainable crop production that maintains environmental quality.

Comments received on the training:

Farmers reported saving \$20 to \$60 per acre on fertilizer cost from their participation in this training program.

“An excellent review of soil fertility and crop nutrient needs.”

“I think this training will save me a lot of money for fertilizer that I don’t need, and also help me produce crop more efficiently than before. Thank You.”

“The training was excellent. It made my understanding of Nutrient Management quite complete. Good job.”

“Cutting back on amount of manure per acre to cover more acres and eliminate phosphorous and potash.”

Why Should I Attend Nutrient Management Training??

- This training will certify you to write and sign your own Nutrient Management Plan for the State of Wisconsin and for your local Land Conservation Office.
- Manage soil fertility
- Maximize crop yield
- Reduce fertilizer cost
- Comply with state law
- Protect the environment

University of Wisconsin-Extension provides equal opportunities in employment and programming, including Title IX requirements.
